REASON FOR ALLOWANCE

1. Yoshida et al, Dienaz, Noma et al disclose a tire comprising at least one carcasstype reinforcement structure anchored on each side of the tire in a bead whose base is intended to be mounted on a rim seat, each bead extending radially outwards by a sidewall, the sidewalls radially outwardly joining a tread, the carcass-type reinforcement structure extending circumferentially from the bead to the sidewall, and a crown reinforcement, each of the beads further comprising a main anchoring zone shown at for attaching the reinforcement structure, the tire comprising in a radially outer position relative to the main anchoring zone a rim protector provided with a rubber projection extending in the region extending axially outwardly relative to the sidewall and comprising at least one secondary anchoring zone comprising a circumferential cord winding, the winding cooperating with an adjacent portion of a secondary reinforcement structure via a rubber anchoring mix, said anchoring zones being oriented substantially radially. Declercy discloses the use of adapters mounted between the beads of a tire and the bead seat of a rim to permit mounting of oversized tires on standard rims. However, none of the references of record suggests a tire wherein at least one secondary anchoring zone comprises a cord batch which includes circumferentially extending radially spaced cord portions cooperating with the second reinforcement portions via a rubber anchoring mix in the manner defined in the instant claims 1, 13 and 16 and in combination with other limitations of the claims. Therefore, claims 2, 4, 6-12, 14-15, depending therefrom, are considered to be allowable.

Conclusion

Art Unit: 3617

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frantz F. Jules whose telephone number is (703) 308-8780. The examiner can normally be reached on Monday-Thursday and every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph S. Morano can be reached on (703) 308-0230. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
